MANASVI SAXENA

(571) · 442 · 1509 • msaxena2@illinois.edu • github.com/msaxena2

EDUCATION

M.S. Computer Science, University of Illinois – Urbana Champaign May 2018

· Relevant Coursework - Formal Methods of Software Development, Logic in Computer Science, Computer and Cyrptocurrency Security, Runtime Verification

B.S. Computer Science, University of Illinois – Urbana Champaign May 2015

· Relevant Coursework - Programming Languages and Compilers, Fundamental Algorithms, Computer Networking

EXPERIENCE

Formal Systems Laboratory, University of Illinois August 2016 - Current
Researcher Assistant *Urbana, IL*

· Implementing a Proof Assistant/Proof Debugger for the K Semantics Framework. K (github.com/kframework/k) is a rewrite based semantics framework in which programming languages can be defined using configurations, computations and rules. Proof Assistant will be used to prove program correctness using programming language's semantics.

Runtime Verification Inc., Urbana, Illinois July 2015 - May 2016
Software Engineer *Urbana, IL*

· Worked on a team developing a dynamic analysis tool for finding undefined behavior in C programs, using formal semantics of C.
· Worked on improving tool's performance, and evaluated its applications on large codebases.

Formal Systems Laboratory, University of Illinois August 2014 - May 2015
Undergraduate Researcher *Urbana, IL*

· Developed a Semantics based Debugger for the K Semantics Framework.
· Debugger helps users find bugs in formal semantics defined in K. Allows users to step through the execution of their program, examine the state space, configurations, and rules among other features.

Coordinated Science Lab, University of Illinois Summer 2014
Undergraduate Researcher *Urbana, IL*

· Worked on visualization of a large dataset containing records of faulty medical devices by the Food and Drug Administration (FDA).
· Created an interactive web application that displays the visualizations using PHP/Javascript.

PROJECTS

KEVM - EVM Semantics in K github.com/kframework/evm-semantics

· Part of team working on formalizing the semantics of the Ethereum ecosystem in K. The executable semantics is one of the most complete formalizations of the Ethereum ecosystem. The semantics have been used to analyze real smart contracts on the Ethereum Blockchain.

K Semantics Framework github.com/kframework/k

· Core developer. In charge of developing debugging capabilities, and maintaining the rewrite engine.
