SUMMARY

Research scientist and entrepreneur with a PhD in Computer Science and extensive experience developing AI-enabled software systems with formal-methods-based correctness guarantees. Demonstrated success in translating academic research into production-scale applications, including hands-on experience with Amazon's S3 Automated Reasoning Group.

EDUCATION

Ph.D. Computer Science, University of Illinois Urbana-Champaign

Dec 2024

- Advisor - Prof. Grigore Roşu
- Thesis - A Semantics-First Approach to Safe Guidelines-Based Clinical Decision Support

M.S. Computer Science, University of Illinois Urbana-Champaign

May 2018

- Relevant Coursework - Formal Methods of Software Development, Runtime Verification, Logic in Computer Science, Computer and Cryptocurrency Security

B.S. Computer Science, University of Illinois Urbana-Champaign

May 2015

- Relevant Coursework - Programming Languages and Compilers, Fundamental Algorithms, Theory of Computation, Computer Networking, Artificial Intelligence

EXPERIENCE

Satyax Inc., Urbana, Illinois

Founder & CEO

January 2025 – Present

Urbana, IL

- Building a platform for trustworthy advanced clinical decision support that integrates intelligence with formal-methods-based mathematical safety guarantees. The software assists with acute conditions such as sepsis, representing the first formally verified comprehensive clinical decision support system with mathematical proofs of correctness.
- Translating doctoral research on a formal-semantics-driven approach to encoding medical knowledge in a computable yet clinician-comprehensible form, enabling the development of intelligent yet safe clinical decision support systems that foster greater clinician confidence through transparency, addressing concerns of safety and opaqueness associated with black-box approaches.
- Leveraging classical machine learning (ML), large language models (LLMs), and retrieval-augmented generation (RAG) to enhance contextual relevance, accuracy, and trust while ensuring compliance with HIPAA and best practices for managing Personally Identifiable Information (PII) and Protected Health Information (PHI).
- Utilizes containerized (Docker/Kubernetes) and cloud-native architecture integrated with the OpenAI SDK, enabling secure and scalable interoperability with EHR systems.

S3 Automated Reasoning Group, Amazon Web Services (AWS)

Applied Scientist Intern

Summer 2021 & 2020

- Developed techniques and tooling to evaluate the compliance of highly concurrent, distributed code against properties expressed as RV-Monitor specifications (<https://github.com/runtimeverification/rv-monitor>) using the existing test suite.
- Optimized RV-Monitor, an academic runtime verification tool, to handle millions of lines of code and efficiently express properties relevant to concurrent systems, such as read-after-write consistency and serializability, enabling analysis at the scale of massively parallel and distributed systems like S3.
- Built DevOps workflows to verify conformance of S3 codebase with RV-Monitor specifications and prevent complex, cross-cutting bugs from reaching production.

Formal Systems Laboratory, University of Illinois

Research Assistant

May 2016 - December 2024

Urbana, IL

- Developed the MediK Framework, a DSL for encoding medical guidelines using state machines with strong correctness guarantees (<https://github.com/medik-framework>).

- Maintained RV-Monitor, a language independent monitoring framework that supports rich formalisms for expressing properties.
- Contributed to KEVM, formalizing the semantics of the Ethereum Virtual Machine (EVM) in the K Framework (<http://github.com/runtimeverification/evm-semantics>).

Runtime Verification Inc., Urbana, Illinois
Formal Verification Engineer

July 2015 - May 2016
Urbana, IL

- Worked on a team developing a dynamic analysis tool for finding undefined behavior in C programs, using formal semantics of C.
- Worked on improving tool's performance, and evaluated its applications on large codebases.

PROJECTS

The MediK Framework – Trustworthy Intelligent Decision Support

- *Domain-Specific Language* for encoding medical guidelines as verifiable state machines.
- *AI-enabled*: Uses classical ML and GenAI to improve accuracy and contextual relevance of rendered support using accumulated patient data.
- *Safety guarantees*: Provides mathematical proofs of correctness while maintaining clinical interpretability; uses RAG to constrain outputs within peer-reviewed guidelines to ensure safety.
- *Comprehensive DevOps*: Containerized Docker-based setup atop EKS and SageMaker-managed AI models.
- *Repository*: <https://github.com/medik-framework>

RV-Monitor

- *Core team member* maintaining language-agnostic monitor framework.
- *Optimized for enterprise-scale systems* with *rich formalisms* for expressing complex properties.
- *Repository*: <https://github.com/runtimeverification/rv-monitor>

KEVM - Semantics of the EVM in K

- *Formalization* of the Ethereum Virtual Machine (EVM) in the K Framework. Contributed to the semantics of the Ethereum ABI, as an extension to the original semantics.
- *Enables formal analysis* of smart contracts with high degree of automation.
- *Repository*: <https://github.com/runtimeverification/evm-semantics>

CORE COMPETENCIES

Automated Reasoning:	Formal Semantics, Static and Dynamic Analysis, Runtime Monitoring
Safety-critical Software:	Trustworthy AI-enabled Systems, Clinician-validated Decision Support
AI Frameworks:	OpenAI SDK, AWS Bedrock, SageMaker
Programming:	Java, Haskell, K Framework, Scala, Python, C
DevOps:	Docker, AWS, EKS
